ADBRNAPATUIR5
Essiac®

At the age of 33 in 1922, Rene Caisse worked as a nurse in Haileybury, Canada. Through one of her patients she learnt of an ancient Ojibwa herbal remedy. The Ojibwa are one tribe of native North American Indians. Rene retained the recipe, but did not use it until her aunt Mireza was diagnosed with terminal cancer.

With the permission of her aunt’s physician, Dr. Fisher, Rene began making the herbal remedy and giving it to her dying aunt. With only the herbal tea for treatment of her stomach and liver cancer, after two months Mireza’s health had improved substantially. In fact, her improvement was such that she lived for another 21 years.1,2

Rene wrote:
“Dr. Fisher was so impressed he asked me to use the treatment on some of his other hopeless cancer cases. Other doctors heard about me from Dr. Fisher and asked me to treat patients for them after everything medical science had to offer had failed.” 2

Rene then teamed with Dr. Fisher and began experiments on mice inoculated with human cancer. Rene discovered the best results could be obtained by injecting part of the formula and administering the other part orally. The other doctors who had heard about Rene’s work through Dr. Fisher began sending her their ‘hopeless’ cases. These cases were usually the advanced or terminal cancer patients which orthodox medicine had given up on. After seeing the results Rene was obtaining, eight doctors including Dr. Fisher of Toronto signed a petition, requesting her work be proven on a large scale. The department of Health and Welfare responded, intending to arrest Rene, but instead decided to allow her to perform tests on mice with them.1

Shortly after opening a treatment clinic where Rene helped cancer sufferers free of charge, Rene’s mother at age 72 was diagnosed with inoperable liver cancer. According to Dr. Roscoe Graham, she had only days to live. Rene treated her mother with Essiac® and her mother made a full recovery. Rene’s mother lived free from cancer until the age of 90. People suffering from cancer, including those ‘given up on’ by orthodox medicine continued to seek Rene’s help for years at her clinic. The support for Rene among the people grew.

Dr. Benjamin Leslie Guyatt, M.D. wrote the following:
“In most cases, distorted countenances became normal, and the pain reduced as treatment proceeded. The relief from pain is a notable feature, as pain in these cases is very difficult to control. On checking authentic cancer cases, it was found hemorrhage was rapidly brought under control in many cases: open lesions of lip and breast responded to treatment; cancer of the cervix, rectum and bladder have been caused to disappear; and patients with cancer of the stomach diagnosed by reputable physicians and surgeons have returned to normal activity.”1

In 1937 a group of U.S. businessmen visited Rene, proposing a foundation in her name and a yearly salary of $50,000 in addition to royalties from the commercialization of Essiac and an upfront payment of 200,000 dollars. These figures equate to a salary of over 700,000 dollars and a payment of close to 1.5 million dollars (Canadian) for the year of 2007. Rene refused the offer as she believed that the formula for Essiac® would be exploited for profit.
In 1938 a Bill was presented to the 2nd Session of the 20th Legislature of Ontario for: "An act to authorize Rene Caisse to practice medicine in the province of Ontario in the treatment of cancer and conditions resulting therefrom."

Along with the Bill was a petition which had gathered 55,000 signatures. The bill failed by only 3 votes, but not without some influence from the Canadian Medical Association. The next move against Rene was the passing of a new act for the investigation of remedies for cancer.

In March of 1939, Rene and 387 of her supporting patients attended a public hearing before the full cancer commission. The Royal Commission allowed only 49 of the patients to testify. The commissioners did not care what the patients had to say. Most of the testimonies were dismissed as incorrect original diagnoses, with some doctors even denying their own previous diagnoses.

In short, they ruled on the claims that:
- Patients who received treatment from Rene had been wrongly diagnosed (by trained doctors making many life or death evaluations)
- Patients who did recover experienced "Spontaneous Remission" (A blatant lie)

In December 1939 the cancer commission effectively stated in their report after the hearing Essiac® had no merit and unless Rene disclosed the formula she would be subject to prosecution under the Kirby bill.

Rene stated: "I want to know that suffering humanity will benefit by it. When I can be given the assurance, I am willing to disclose my formula, but I have got to know that it is going to get to suffering humanity."

Rene kept her clinic open but closed it in 1942 when the fear of being prosecuted and imprisoned by the Kirby bill became too much for her.

In 1959, by invitation Rene teamed with Dr. Charles Armao Brusch, who was one of the most respected physicians in the United States and personal physician to president John F. Kennedy.

Rene, working with Dr. Brusch and the director of research Dr. Charles McClure tested Essiac® on cancer patients in the Brusch clinic. Essiac® proved its worth on all patients. Rene and Brusch then attempted to improve Essiac® by adding additional ingredients, which proved to be successful, increasing it’s potency.

Soon after, the medical establishment applied it’s dictatorial force by making it increasingly difficult for Rene and Dr. Brusch by refusing to accept further results and forbidding it’s members to refer patients to ‘unproven remedies’.

At that point Rene returned home to Bracebridge, whilst she entrusted Dr. Brusch to continue treating the few patients that came to him with Essiac®.

Rene remained active from 1962 to 1978 by supplying Essiac® to Dr. Brusch.

In 1984 Dr. Brusch treated his own bowel cancer solely with Essiac®.

Dr. Brusch wrote:
"I endorse this therapy even today for I have in fact cured my own cancer, the original site of which was the lower bowel, through Essiac® alone."

In October 1977 Rene signed a contract with David Fingard. The contract agreements were that for rights to the Essiac® Formula, David’s company Resperin would open five fully staffed clinics across Canada and give Essiac® free to terminally ill cancer patients. Shortly after signing Resperin applied to the department of Health and Welfare asking permission for Essiac® to be tested in a pilot program on terminal cancer patients. Hundreds of doctors across Canada, plus two hospitals were to administer Essiac® to their patients and monitor the results.
The clinical trials did not go to plan. Again the medical establishment dictated proceedings in their own way. However, there is validity to the results of the Resperin treatment program failing in the treatment of cancer as Dr. Brusch, along with a private investigator found out. Resperin failed to conduct the clinical trials adequately, which the Department of Health and Welfare knew – stating in their 1981 internal memorandum “The results of the clinical studies are impossible to evaluate”. Despite this, in 1982 the department of Health and Welfare shut down the testing program. ¹

The original Essiac® formula in a product form is still available at the time of writing through Essiac® international. See the resources section for details. For reasons you may still be learning at this point, no medical claims can be made for Essiac® by the manufacturer or the distributor.³

In 1984 Dr. Brusch met a woman from Vancouver named Elaine Alexander. Elaine had been following the work of Rene for some time. In 1988 Elaine told Dr. Brusch of her idea to bring Essiac® to the people. Instead of trying to get the medical establishment to realize the worth of Essiac®, Elaine’s idea was to simply market the remedy as a harmless, detoxifying herbal tea.¹

With this plan, they would not be able to use the name Essiac®, nor would they be able to make any claims regarding any benefit the tea might have for cancer sufferers, as they knew the medical establishment would not allow it. The medical establishment was after a drug to aid in the battle against cancer. Essiac® is not an exclusive drug, and for that reason it could not be marketed for profit by the pharmaceutical/medical establishment complex.

Elaine selected carefully and then approached Flora – a Canadian health product company. Flora is owned by Thomas Greither, one of three sons of Dr. Otto Greither Jr. with his own independent health company. Together, Thomas, Elaine and Dr. Brusch developed Flor·Essence® herbal tea. Flor·Essence® is not simply the original Essiac® formula, but the improved formula that Dr. Brusch and Rene Caisse discovered.

Flor·Essence® is still widely available today, including in Canada, the United States and Australia.¹

The story you have just read has been shortened for purposes of this report, but is still an accurate account of the history of Essiac®. For further information and for a more complete account of Rene Caisse, Elaine Alexander or Dr. Charles Armao Brusch, consider the resources listed or do your own research, for all three people have done amazing things in their lifetimes.

At this point, depending on your knowledge, you may be in disbelief or have a number of questions or concerns. Firstly, this report is not to persuade you of anything, for the truth speaks for itself. Secondly, such thoughts may be due to the politics behind cancer treatment and cures at this point. The political side will not be covered (at least not in this edition) but it will continue to appear, giving you a grasp of the bigger picture. You see, the world is not all that it seems. As an example, don’t expect any of this to be shown on the television or the newspapers. There is good reason for that also. But for now, let us continue, as we have only touched the surface so far.

IV
Antoine Prioré

Italian born Antoine Prioré, after the end of the 2nd world war, living in France, built and tested electromagnetic healing machines of startling effectiveness. In hundreds of strictly controlled tests with laboratory animals, Prioré's machine cured a wide variety of the most difficult kinds of terminal, fatal diseases known today. Still little understood, L'Affaire Prioré (Prioré’s machine) works by amplifying a cell's natural regenerative mechanism.

Attempts to interest leading Bordeaux physicists and leading cancer experts in the results of the new treatment approach were laughed off or dismissed. Prioré’s response was to build a new and more complicated version of his treatment device. Secretly he treated dozens of hopeless cancer patients. At Prioré’s funeral, a small platoon of mourners was composed of the now-older people who had been cured of their terrible afflictions by Prioré in the late 1950s.

The mayor of Bordeaux, who later became prime minister of France, was Jacques Chaban-Delmas. He was very interested in Prioré’s work. Funded by millions of dollars, Prioré’s machines concretely demonstrated a nearly 100% cure of all kinds of terminal cancers and leukemias, in thousands of rigorous laboratory tests with animals. These results were shown to medical scientists as early as 1960.

Prioré’s sister in Italy then came down with cancer. Prioré issued an ultimatum to his associates to build the bigger machine he needed, so that he could save his sister's life. Conventional engineers repeatedly changed Prioré's design, thinking many components unnecessary, etc. and causing machine failures. Prioré’s sister died before the machine could be finished because of these unnecessary setbacks. A grief-stricken Prioré went into isolation, unwilling to talk to anyone.

From 1966 on, many papers were published on the results of applying the Prioré technique to various animals and diseases. The results continued to be revolutionary.

Biologist André Lwoff went from an ardent skeptic to an admirer and supporter of Prioré’s work, because of the undisputed results. Eventually the French Government backed the construction of a more powerful Prioré device. The M-600, a 3 story device was built to cure humans. The machines 6 meter long, 60cm diameter pyrex tube failed after a short duration of operating the device. During the approximate 10 days that the machine was in operation, the results were formidable. The results were presented in notes to the Academy of Sciences by Pautrizel and his team in 1978.

Pautrizel then came under suppression himself, with funds being pulled, postings being denied, etc. Pautrizel eventually became so emotionally overwrought that he gave up his medical career and retired and gave himself over to alcohol. Every one of the collaborators of Pautrizel saw their careers put in jeopardy, compromised, or broken.

About this time Prioré's doctoral thesis, backed by both Pautrizel and Nobel Laureate André Lwoff himself, was summarily refused by the President of the University of Bordeaux.

In 1974, a change of local government lost Prioré his government supporters, his support and funding were lost, and subsequent attempts to restore his technology into the public domain were viciously suppressed.

Admiral Pierre Emeury, conseiller scientifique de la presidence, discovered L'Affaire Prioré. His inquest led him to conclude that the Prioré discovery was the most important medical discovery of the entire century.¹²
Vitamin B₁₇  
Also known as Laetrile (LAEvo-mandeloniTRILE-glucoside) or Amygdalin

Laetrile is possibly the most well known of all alternative treatments for cancer. The battle for awareness of Laetrile has been a long one and continues presently. You may have ‘heard’ things about either Laetrile or Vitamin B₁₇ throughout your lifetime. There have been many lies and much disinformation spread over the years and it continues today. The political and power agenda is the main reason why.

Laetrile has not been approved by the FDA (Food and Drug Administration) in the United States. Laetrile has not been put through the extensive testing that all new drugs must go through to be approved. (Although the FDA may label Vitamin B₁₇ as a drug, it is not) This process takes years, tens of thousands of pages of reports and costs hundreds of millions of dollars. Only the huge pharmaceutical/drug companies can afford this process which the FDA knows.

Since Vitamin B₁₇ is found naturally, knowledge of its ability among the entire population would likely mean reduced instances of cancer and little to no reliance on high costing orthodox treatments. This could pose a huge financial let-down for both the medical establishment and big pharmaceutical companies. Fewer people getting cancer, and even fewer taking chemotherapy, radiation and surgical treatment. Clearly there is billions of dollars involved in this agenda. Indeed, there is more money to be made in searching for a cure for cancer than actually finding one, and the ACS (American Cancer Society) and AMA (American Medical Association) certainly know this. Most doctors are unaware of alternative treatments for cancer including Laetrile. This includes those doing research in the field. Those that do often have only read the literature of their respected establishment.

So we have two groups - those that have accepted the reports and findings of the FDA and the ACS; and those that have accepted the reports and testimonies of the doctors who have worked with Laetrile on cancer patients. Only one side holds the truth.

Ask yourself: Are you really living in the world you think you are?

For the sake of this report we will return to Laetrile itself, rather than the politics.

Vitamin B₁₇ is found naturally in certain foods which are normally absent in our diets. Laetrile is the pure form of Vitamin B₁₇; Ernest T. Krebs Jr, PhD and Byron Krebs, M.D. with their father, Ernst T. Krebs Sr, M.D. perfected Laetrile in 1952.¹

The body allows cancer to develop due to a deficiency in certain chemicals in the diet, as well as a deficiency in certain enzymes produced in the pancreas. The chemicals in question are nitrilosides or vitamin B₁₇. The pancreatic enzymes in question are trypsin and chymotrypsin.

B₁₇ contains 2 units of glucose, 1 unit of benzaldehyde and 1 unit of hydrogen cyanide, all locked together. It is very important to note all units are locked together, and the benzaldehyde and cyanide units are harmless in this state. The B₁₇ 'package' only becomes unlocked, releasing the cyanide unit in the presence of an enzyme group called beta-glucosidase and water. Thanks to nature, beta-glucosidase is found in high degrees in cancerous cells. It is the units of cyanide and benzaldehyde that kills the cancer cell. It needs to be said that normal cells do contain beta-glucosidase also - however, they contain around 3000 times less than that of the cancer cell, and a natural protective enzyme called rhodanese.¹
Philip Binzel, Jr., M.D. writes:

“A doctor from the FDA once said that Laetrile contains “free” hydrogen cyanide and, thus, is toxic. I would like to correct that misconception: There is no “free” hydrogen cyanide in Laetrile. When Laetrile comes in contact with the enzyme beta-glucosidase, the Laetrile is broken down to form two molecules of glucose, one molecule of benzaldehyde and one molecule of hydrogen cyanide (HCN). Within the body, the cancer cell—and only the cancer cell—contains that enzyme. The key word here is that the HCN must be FORMED. It is not floating around freely in the Laetrile and then released. It must be manufactured. The enzyme beta glucosidase, and only that enzyme, is capable of manufacturing the HCN from Laetrile. If there are no cancer cells in the body, there is no beta-glucosidase. If there is no beta-glucosidase, no HCN will be formed from the Laetrile.”

The cyanide scare was widely used in the 1970’s and still today the idea that Laetrile is toxic is believed by some due to this tactic. An example was the posters ordered to be put in all government buildings which read “Beware of Laetrile! It is toxic!”

Thousands of Americans each year travel to the Oasis of Hope hospital in Mexico to seek the help of Dr. Ernesto Contreras Rodriguez (and now his son Dr. Francisco Contreras). His patients are quite often terminal cancer patients who have been told they have only months to live. The Oasis of Hope hospital uses “B17 Metabolic Therapy”. More than 100,000 patients have sought Contreras' care since 1963.

Dr. Harold W. Manner writes:

“Metabolic Therapy, put simply, is the use of natural food products and vitamins to prevent and treat cancer by building a strong immune system. The key to stopping the cancer growth doesn’t lie in traditional cancer treatments like chemo and radiation therapy or surgery, but in an approach that works with the body instead of against it. Once the body is cleansed of unnatural substances - detoxification, and vitamins are administered to build the immune system, enzymes are given to begin breaking down the protein shell which surrounds the cancer growth and protects it from the body’s immune system. Raw glandular products are also used to augment the body’s natural glands. Vitamin B17 (Laetrile) and Vitamin A are then given to the patient to work with the enzymes and the immune system to destroy the cancer cell.”

“The facts are, as partially detailed in the letter of March 22, 1974 from Dean Burk to Seymour Perry, that positive, statistically highly significant, anticancer activity by Laetrile in animal tumor systems has been observed in at least 5 independent institutions in 3 widely separated countries of the world, with a variety of animal cancers. When you have power you don't have to tell the truth. That's a rule that's been working in this world for generations. And there are a great many people who don't tell the truth when they are in power in administrative positions.” Wrote Dean Burk, former head of National Cancer Institute Research.
In 1972 Sloan Memorial Kettering Cancer Research commissioned their top senior cancer researcher to conduct tests over a 5 year period between 1972 and 1977 and finally put an end to this Laetrile quackery. They asked Dr. Kanematsu Sugiura, their most senior researcher with over 60 years experience in cancer research and who had been under their employment since 1917 and totally dedicated to cancer research.

Dr. Kanematsu Sugiura's work was trusted and his honesty and integrity was admired and unquestioned by all. Hundreds of Sugiura's research papers were published.

Dr. Chester Stock, the Head of Sloan Kettering's laboratory-testing division wrote:
"Few if any names in cancer research are as widely known as Kanematsu Sugiura's....Possibly the highest regard in which his work is held is best characterized by a comment made to me by a visiting investigator in cancer research from Russia. He said "when Sugiura publishes, we know we do not have to repeat the study, for we would obtain the same results he has reported'".

At the conclusion of the trials, on June 15, 1977 Sloan Memorial Kettering Cancer Research released a press statement. Over 100 reporters and half a dozen film crews from the leading television stations had been assembled to hear the long awaited official verdict on Laetrile from the worlds most prestigious cancer research centre. On the Dais were physicians with impeccable credentials. Dr. Robert Good began to speak. After general remarks condemning Laetrile and its use, he passed the microphone to Dr Stock. The same Doctor Chester Stock who had praised Sugiura's work took the microphone and began describing the finer details of the testing. As his voice droned on... it was evident all eyes were on Dr. Sugiura but he was not given the opportunity to speak.

The press release said,
"...Laetrile was found to possess neither preventative, nor tumor-regressent, nor anti-metastatic, nor curative anticancer activity."

Suddenly a journalist shouted:
"Dr. Kanematsu Sugiura"
"Do you stick by your belief that Laetrile stops the spread of cancer?"
He replied; "I stick." 5

Dr. Sugiura reported Laetrile was more effective in the control of cancer than any substance he had ever tested. (Incidentally Dr. Sugiura had been researching cancer since 1911) His results were not acceptable to his superiors, so they brought in other researchers to duplicate Sugiura’s work in the hope to prove the results false. Instead the follow-up studies confirmed Sugiura. Undaunted, his superiors called for new experiments over and over again, following procedures designed to make the tests fail. Eventually they did fail, and it was that failure that was announced to the world. 5

Author Dr. Ralph Moss worked at Sloan-Kettering during the amygdalin trials and went public on November 18, 1977, exposing the lies told by Sloan-Kettering about the Laetrile/amygdalin trials. He was fired the next day. 5
Many other alternative treatments

A 16 year old Virginia boy named Abraham Cherrix was diagnosed with Hodgkin’s disease (a cancer of the lymph nodes) in 2005. After his initial diagnosis, Abraham submitted to chemotherapy, which made him feel sick and weak. His cancer went into brief remission before returning earlier this year, when he decided he would not undergo more chemotherapy, but rather try alternative herbal treatments. Abraham's parents supported their son's decision and began taking him to the Hoxsey Clinic in Mexico for treatments involving cancer-fighting herbs and an organic diet.

However, the Virginia Department of Social Services decided to get involved, and asked the state court to require Abraham's parents to return him to a hospital in Virginia for conventional treatment, which would include stronger chemotherapy than he'd previously undergone, as well as radiation therapy. The court agreed and ordered Abraham's parents to give consent for their son to be treated with harsh chemo treatments at Children's Hospital of the King's Daughters in Norfolk.

Harry Hoxsey is the founder of the "Hoxsey Method" with which Abraham Cherrix was attempting to treat his cancer. Hoxsey is the great-grandson of John Hoxsey, an American physician who discovered a remarkably effective cancer treatment in 1840 by watching horses with cancer cure themselves by foraging for certain rare herbs.

Harry Hoxsey, a coal miner with no formal medical training, began promoting his great-grandfather's cancer formula -- which contained a number of herbs, including bloodroot, burdock, red clover, licorice root, pokeroot, barberry root, buckthorn, prickly ash, stillingia root and cascara -- in the 1930s.

Hoxsey was not a doctor, so he partnered with various MD’s and let them perform the treatments. Hoxsey grew to running numerous clinics in various states across the U.S. The medical establishment (the FDA, AMA and NCI) attacked Hoxsey by first revoking licenses of the physicians he employed, then forbidding him to operate his clinics and announce to patients his treatment was no longer available, then finally padlocking all his clinics in a single day. At the same time false reports were being spread in the Journal of the American Medical Association about Hoxsey.

Having no choice Hoxsey relocated to Mexico.

At the age of 41, Rod Czlonka was diagnosed with terminal brain cancer and told he was about to die. Rod fought his terminal cancer with nutrition and won.

He is just one individual who has learnt that in the same way we get cancer from our diets and our surroundings, we can eliminate it with proper nutrition and reducing the toxicities in our environments.

Prevention is hardly considered by the medical establishment. It is only given a small percentage out of the billions per year that gets poured into cancer research. Research is primarily directed into drug treatments as that is where the money lies.
Dr. Morton Walker, D.P.M. writes:
Carnivora® is a patented extract of the Venus’ flytrap plant. To be a bit more precise, it’s the standardized, purified juice taken from that rare North American plant by an exclusive, patented process. For more than thirty years, Dr. Keller (Of Germany) investigated this substance and gained clinical experience with some 15,000 cancer patients, often with startling success.

In a double-blind, placebo controlled study of forty patients with stomach cancer, 44 percent of those receiving Polyerga® lived at least five years compared to only 11 percent of control patients. In a similar double-blind, placebo-controlled study of forty patients suffering from metastasized colon cancer, the Polyerga® group likewise showed a significant improvement in survival rates.¹ They are just two excerpts from a number of alternative cancer treatment methods Dr. Walker has researched.

As Dr. Ralph W. Moss describes in Cancer Therapy, "Japanese scientists studied Chlorella pyrenoidosa as a biological response modifier … Since chlorella does not directly kill cancer cells, the scientists concluded that its effects were caused by boosting the immune response."

In one Japanese study, scientists placed lab mice on a chlorella regimen for ten days, then injected the mice with three types of cancer. According to Dr. Moss, over 70 percent of the chlorella-strengthened mice did not develop cancer, while all of the untreated mice died within 20 days.²

Samuel S. Epstein, M.D. writes:
"The American Cancer Society, together with the American College of Radiologists, has insisted on pursuing large-scale mammography screening programs for breast cancer, including its use in younger women, even though the National Cancer Institute and other experts are now agreed that these are likely to cause more cancers than could possibly be detected."¹²

According to Keiichi Morishita in his book, Hidden Truth of Cancer, as blood starts to become acidic, the body deposits acidic substances in cells to get them out of the blood. This allows the blood to remain slightly alkaline. However, it causes the cells to become acidic and toxic, which may result in a decrease in oxygen levels, and harm to the DNA and respiratory enzymes.

In 1931 Dr. Warburg won his first Nobel Prize for proving cancer is caused by a lack of oxygen respiration in cells. He stated in an article titled The Prime Cause and Prevention of Cancer that "the cause of cancer is no longer a mystery, we know it occurs whenever any cell is denied 60% of its oxygen requirements."

Prioré Patents

To conclude, we will take a brief look at just a fraction of the type of activities of the medical establishment which have and continue to take place:

...Percentage of cancer patients whose lives are predictably saved by chemotherapy - 3%
Percentage of oncologists who said if they had cancer they would not participate in chemotherapy trials due to its "ineffectiveness and it’s unacceptable toxicity" - 75%
Percentage of people with cancer in the U.S. who receive chemotherapy - 75%.  

...After the vote went against providing Medicare coverage for chiropractic, the AMA took the campaign to a new level of intensity. The AMA's consumer magazines began printing articles that repeatedly called chiropractic "quackery," and greatly exaggerated its dangers.

Caught up in the excitement, the officials of the Committee on Quackery went about the country making speeches about chiropractic that were increasingly malicious. The chairperson of the committee, Dr. Joseph A. Sabatier, told a gathering of medical society officials that "rabid dogs and chiropractors fit into the same category...chiropractors are nice [but] they kill people."  

In 1975, an anonymous individual who came to be called "Sore Throat" sent a draft of what he or she said were internal AMA documents to reporters at most of the major newspapers in the country as well as to congressional committees and consumer activist groups. These documents revealed postal and income tax abuses, unethical use of the AMA journal, AMA control of congressional leaders and the campaign to destroy chiropractic.  

In 1976 Wilks and three other chiropractors filed suit against the AMA. Knowing it would be disastrous for the AMA if the truth of their activities were to get out, they offered to buy off the chiropractors. Needless to say they refused to accept the money. In December 1980, the case went to trial, beginning an epic court battle. In August of 1987, the AMA was ruled guilty of trying to eliminate the chiropractic profession. The AMA appealed, but in February 1990, the ruling was upheld.

Finally, in December 1991, 15 bitter years after Chester Wilk and the McAndrews brothers had filed suit, the AMA agreed to make a US$53.5 million payment for the chiropractors' legal costs and to revise its position.  

"Everyone should know that most cancer research is largely a fraud and that the major cancer research organizations are derelict in their duties to the people who support them." - Linus Pauling PhD (Two-time Nobel Prize winner).

So what do you really know about the world you live in? Do you keep a close watch on the television for news and current affairs programs? Perhaps read a newspaper everyday? All very well, but it would be seriously naïve to believe these sources of information tell all that matters and are always truthful in what is reported. Sadly, at present money rules. It rules in that profit is given precedence over everything else, including health. We are no longer seen as people - we are seen as consumers. Consumers who generate profit with every financial decision we make. To influence our decisions, our thoughts and even our beliefs, the propaganda machines run continually.

To know the truth one must first see the lies. To see the lies we must scrupulously seek knowledge, considering both sides of the story. Having completed reading this report, regardless of whether you believe the information, are unsure or disbelieve it, it would be wise to investigate as necessary for yourself. Uncover the lies and deception and the truth remains.
